For: AUTO POWER CONTROL CIRCUIT FOR LASER DIODE

Honorable Commissioner of Patents Alexandria, Virginia 22313-1450

AMENDMENT UNDER 37 C.F.R. §1.111

Sir:

In response to the Office Action dated January 16, 2003, please amend the above-identified application as follows:

IN THE CLAIMS:

Please add the following new claims:

21. A power control circuit for a laser diode, comprising:
an amplifier circuit producing at an output terminal thereof an output voltage
responsive to a voltage difference between a reference voltage and a feedback voltage that is
indicative of an optical power generated by said laser diode in response to a driving current
flowing therethrough, said amplifier circuit including an operational amplifier;
a driving circuit responding to said output voltage to control said driving current so as
to make said voltage difference small;
a capacitor coupled between input and output ends of said operation amplifier; and
a first switch coupled in parallel to said capacitor.
•
22. The power control circuit according to claim 21, further comprising:
a first resistor coupled to an input end of said operational amplifier; and
a second switch coupled to said input end of said operational amplifier through said
